I.T. FOR BUSINESS

Datalinx Warehouse Manager

The Smart WMS for Sage 200

Warehouse Manager 200

Warehouse Manager 200 is the most flexible warehouse and inventory management system available for Sage 200 in Europe and provides real-time warehouse management using wireless handhelds. It has impressive functionalities; including batch and serial number traceability, providing a practical solution to the problem of stocktaking these products which is particularly key for the food and pharmaceutical industries.

Fully integrated within the Sage 200 Commercial suite, Warehouse Manager 200 is the only Sage Certified and Sage Approved warehouse management system available in the UK and Europe.

75% Warehouse Efficiency Gains

With lead times from order to customer delivery, becoming ever shorter, today's business must be able to continue to trade and ship goods whilst essential warehouse management tasks are completed. Datalinx brings the processes of a large software system to the Sage 200 arena and enables new employees to work independently after just 30 minutes of training. The Datalinx hand held client which runs on the latest wireless mobile devices, guides users through the work processes and to product locations, instructing the user on which product to receipt, pick or count and from which location.

Dispatch 50% More Orders

Datalinx delivers a solution that reduces picking times, minimises errors, and through the use of barcode scanning increases the number of orders that can be dispatched. With consolidated picking, pack bench technology and courier integration the warehouse is empowered to meet the demand for greater efficiencies, as well as manage the increasing requirement for the supply chain to receipt and despatch greater volume of product, often with fewer lines per order and in a shorter turnaround time.

Reduce Stock Take Time by 50%

Today's business must be able to continue to trade and ship goods, whilst essential warehouse management tasks are completed. Whether for periodic stock takes or perpetual, Datalinx enables the count to take place with minimal disruption for the Sage 200 user. This includes the ability to stock take batch and serial numbered product. It is no longer necessary to freeze all movements for the duration of the count. Datalinx Dynamic Stock Taking only requires movements to and from the bin being counted to be paused whilst the count of that specific bin occurs.

Integration

Datalinx Warehouse Manager integrates to Sage 200 Stock Control, Bill of Materials and Project Accounting out-of-the-box. It can use GS1 as well as older barcode formats and can be used with RFID. Through Paradise, full courier integration is also available.

Extends your Sage 200 stock capability onto handheld units on the warehouse floor and add full barcode functionality, and automated label printing. Save time and add accuracy to your stock control.
